

Comparative Performance Measurement System

The MIDAS+™ Comparative Performance Measurement System (CPMS) provides ACS MIDAS+ hospital clients with over 150 fully automated outcome measures and a full range of process measures that can be used to trend hospital performance over time and benchmark performance to other hospitals nationwide.

Since 1997, the MIDAS+ CPMS has grown to include more than 560 hospitals, and currently houses over 100 million patient encounters. Listed with The Joint Commission (TJC) as an ORYX® vendor, the MIDAS+ CPMS is one of the easiest tools on the market to help you meet your current and future regulatory requirements for Performance Measurement.

The MIDAS+ CPMS gives you the tools you need to collect either concurrent or retrospective process data. Plus, you get comparative, severity-adjusted outcome data from one of the nation's largest concurrent databases to complement your process performance data.

Features and Benefits

- Support for all hospital measure topics listed with TJC and CMS for the National Hospital Quality Initiative
- Support for Acute Myocardial Infarction, Pneumonia, Congestive Heart Failure, Pregnancy Related Conditions, Surgical Care Improvement Project, Children's Asthma Care, Hospital Based Inpatient Psychiatric Services (test set), and Hospital Outpatient Program (beginning in February 2008)
- Worklists automatically identify patients for study and assign them for review
- Focus studies streamline data collection
- Data fields can be added to customize data collection
- Item-level help ensures consistent data collection across all sites
- Profiles identify opportunities for improvement and allow drill down to encounter-level detail
- Includes automatic missing data and data quality alerts
- Quarterly comparison reports include eligibility analysis, control charts, and trend analysis
- Ability to integrate National Hospital Quality Measures with Physician Profiles and other custom profiles in MIDAS+ Care Management and MIDAS+ DataVision

Behavioral Health

ACS MIDAS+ also offers a specialized measure set for Behavioral Health hospitals. Over 80 measures that examine clinical outcomes are available as well as care management processes related to the care of inpatient psychiatric patients. Selected measures in this set may be used to meet TJC ORYX requirements for those hospitals that accredit under either the Hospital or Behavioral Health Standards.

"Our organization finds your product particularly valuable in providing comparative information as well as assisting our compliance with regulatory and accreditation reporting requirements. Both of our hospitals, Holmes Regional Medical Center and Cape Canaveral Hospital, participate. Your software tools add value as we seek to be data driven in our continuous improvement efforts. Thank you for the excellence of your products and the responsiveness of your organization's liaisons."
