

DataVision™

benchmarking performance
against nationally recognized thresholds

MIDAS+ DataVision offers a full spectrum of data management services that allow you to evaluate and benchmark your performance with one of the nation's largest concurrent comparative databases.

MIDAS+ DataVision is designed to provide Chief Medical Officers, Quality Improvement Directors, Patient Safety Coordinators, Case Managers, and other Clinical and Administrative Leaders with the tools and information needed to improve the value of healthcare. Users can track and analyze clinical, utilization, and provider practice patterns, evaluate high-risk populations, and meet regulatory reporting requirements with The Joint Commission and CMS.

MIDAS+ DataVision gives users direct, desktop access to over 3,000 pre-defined clinical metrics that reflect their organization's clinical performance. Drill down to patient and provider level detail, and get immediate access to one of the nation's largest concurrent comparative databases for clinical benchmarking and achieving hospital pay-for-performance targets.

The unique reporting capability found in MIDAS+ DataVision minimizes the need for complex report writers and virtually eliminates turnaround time for custom reports. Even the most casual end users can conduct custom inquiry with minimal training!

Features and Benefits

- Real-time interface to the hospital information system minimizes data collection
- Nightly summary job provides the most current performance feedback reports
- Patient- and provider-level drill down
- Physician Quality Profiles
- Reports stratified by region, bed size, academic teaching status, case mix index and nursery levels
- Evaluate utilization and quality of care patterns in defined clinical populations
- Severity Adjusted data using 3M APR DRG methodology
- Statistical Process Control Charts
- Prioritization of opportunities for improvement
- Identification of rare event occurrences that represent potential safety issues
- Adult and Pediatric AHRQ Patient Safety Metrics
- Leapfrog Evidence based Referral Volume Metrics
- Hospital Acquired Complications profile
- Rapidly analyze readmission patterns and causative factors
- Evaluate changes in case mix index from year to year
- Identify DRGs potentially over- or under-coded
- Full access to all supporting literature through a subscription to ZynxEvidence™
- Data submission services to The Joint Commission, CMS and the Institute for Healthcare Improvement

"The SmartReport is what impressed me the most. Every 6 months or so, I am responsible to look at our 'top DRGs' that are high volume, high cost, high risk, or high loss. From there, administration could prioritize and focus their PI activities. With SmartReport, MIDAS+ DataVision does all the work.

"We went live with DataVision just as we were updating our LeapFrog online survey. I simply ran the LeapFrog indicator report and my volumes appeared in seconds. We also like the new section on Patient Safety on the SmartReport.

"My Medical Information Management department really likes the Coding Compliance section. I printed out for her the detailed graphs illustrating potential over or undercoding and she is investigating now.

"The Joint Commission loves control charts. Now, with DataVision, they are also one mouse-click away. The Joint Commission also demands comparative data. The comparative graphs are easily modified to the desired time frame and comparative group—again, with a couple of mouse-clicks.

"As a Clinical Outcomes Analyst, DataVision has eased my workload in the first weeks of use. The product is so easy to use, even without formal training, QM staff and nurses are running their own data and I often hear 'Hey! Look at this in DataVision!'"
