

With the abundance of accreditation performance requirements, managing compliance is a monumental task. The MIDAS+ JRepository® solution enables continuous compliance by tracking and managing quality data in a single, accessible, browser-based application. MIDAS+ JRepository boasts on-demand, real-time reporting and powerful modules, including Executive Dashboard, Assessments, Corrective Action Plans, Tracers, Event Reporting, Competency Management, Emergency Preparedness, Resource Library, and Reports.

The unique workgroup design of MIDAS+ JRepository promotes active involvement across your entire organization. It fosters both collaboration and communication while facilitating a cultural shift towards proactive, continuous compliance.

With MIDAS+ JRepository's embedded workflow management and alerts, your teams can leverage your existing e-mail systems to communicate across workgroups, departments and facilities. This enables dynamic compliance for all priority focus areas. The program manager can easily control data access and maintain security.

All regulatory standards and disease-specific care certifications are available through MIDAS+ JRepository, including those of The Joint Commission, CMS, and others.

Using MIDAS+ JRepository, your organization can move away from labor-intensive, paper-based processes and achieve demonstrable gains in quality, patient safety, and infection control. It can be a stand-alone solution or it can be combined with other MIDAS+ solutions to further benefit your accreditation process, enhance quality, and improve performance.

Features & Benefits

- Use a unique workgroup methodology to distribute labor-intensive, departmental processes across the organization, resulting in shared ownership among stakeholders
- Accurately reflect your organization's compliance with real time reporting
- Use automated crosswalk between TJC and CMS conditions of participation
- Review automatically updated TJC standard set content; no need to compare versions
- Address compliance deficiencies with automatically-generated Corrective Action Plans
- Eliminate the time and expense associated with mock surveys and mock audits with the new advanced Tracer module, including pre-built tracer templates and trending reports
- Track custom defined elements determined by the individual health care organization through advanced tracer reporting and have the ability to define thresholds of compliance, per question and per tracer
- Go beyond risk management with our event reporting module, which uses automated processes to handle root cause analysis and ADRs from an accreditation standpoint
- Use the Event module to facilitate requirements and centralize information for Root Cause Analysis, Corrective Action Plan generation, mitigation of recurrence with follow-up tracer activity, and Competency Module tracking
- Use the Emergency Preparedness module to streamline and customize hazard vulnerability analysis (HVA), emergency-related tracers, and Corrective Action Plans
- Access hundreds of customizable templates to manage competency requirements at the departmental level, across the entire organization
- Outsource recommended language changes for regulatory standard updates with hundreds of policies, procedures, forms, logs, and tools, all automatically updated in the Content Vault

"We needed a way to streamline our quality efforts and offer our leadership team the ability to have access to any issue we face for input and awareness. We could have continued to do everything manually, as we always have done, but why? The Joint Commission's changes will have huge impacts on how organizations prepare themselves in the future for unannounced survey teams. MIDAS+ JRepository meets our needs."
