

Meeting TJC Mandates for Physician Profiling

Top-Ranked
Nine-hospital
Health System

Improved
Regulatory
Compliance and
Performance

The Challenge

- In order to effectively meet The Joint Commission mandates, the hospital needed an automated system to profile and review physician activity
- The existing manual process was labor intensive, contained little historical information for trending purposes, generated lots of paper, and was produced only twice a year

The Solution

- Midas+ Statit PPR was implemented to rapidly automate the physician profile requirements
- Profiles with specialty-specific measures were developed for each major department across the Alegent system
- Each physician was assigned a user account and a department profile
- Automated interfaces were developed to refresh profile data frequently

The Results

- Achieved goal of meeting The Joint Commission mandates
- Physicians now have the ability to view their activity profiles online, at their convenience
- Medical Director and physicians have the ability to see how performance has changed over time, which supports performance improvement
- Streamlined process has greatly reduced labor and paper cost
