

# Improving Provider Performance and Patient Outcomes

Health Care  
Industry  
Leader

Improved  
Processes through  
Managing Key  
Indicators

## The Challenge

- Hospital needed an efficient way to present data to physicians with a holistic view of performance related to finance, patient satisfaction, and clinical indicators
- Hospital did not have the ability to report data effectively at the provider level

## The Solution

- Hospital uses Midas+ Statit PPR in conjunction with DataVision in order to track data at a provider level
- Hospital reviewed current processes and implemented changes that will allow for more accurate documentation and coding

## The Results

- Identified opportunities for improvement in documentation and coding
- Increased ability to consistently inform physicians of their outcomes with regard to readmissions, complications, and infection rates based on nationally standardized levels
- Improved processes with regard to OPPE guidelines
